SCIENTIFIC SKILLS

- **Main research interests:** setting up of innovative systems for the diagnosis of allergies, and infectious diseases; oral microbiology; evaluation of antimicrobial effects of molecules and materials employed in medicine and in the building industry; histophysiology of bone and mineralized tissues. In the last few years my work has been focused on mycology, in particular on the study of fungal virulence factors and on the pathogenetic mechanisms of *Candida albicans* and other fungi that behave as opportunistic pathogens. Lately, my interests have expanded to the evaluation of the probiotic and postbiotic activities of several yeasts' species.
- **Technical skills:** cellular microbiology techniques (isolation, growing and stocking of bacterial and fungal strains); setting up of miniaturized system based on protein microarrays; setting up of specimens for the scanning electron microscopy, fluorescence microscopy; histological techniques; ELISA systems.
